CHAPTER - 4

DISEASES OF THE VULVA

a. Vulvitis

Defination - The infection of the vulva causing inflammation is called as vulvitis.

Types

- 1) Acute vulvitis
- 2) Chronic vulvitis

Aetiology

1) Acute vulvitis

- ❖ Gonococcal infection
- ❖ Streptococcal infection
- ❖ Trichomonal infection
- ❖ Monilial infection
- ❖ Fungal infection

2) Chronic vulvitis

- ❖ Tuberculosis
- ❖ Filiariasis
- ❖ Leprosy
- ❖ Venereal diseases
- ❖ Dermatological lesions of vulva
- ❖ Diabetes mellitis

Symptoms

1) Acute vulvitis

- Pain at vulva

- Itching of vulva
- Burning sensation at vulval region especially after micturation
- There is redness, oedema with severe tenderness of vulva.

2) Chronic vulvitis

- urethritis - there is pain during and after micturation
- Purulent yellowish greenish discharge from vagina
- Inflammation of inguinal glands
- Intense vulval itching
- There are furuncles on vulva
- Due to infection there is on and off fever

Diagnosis

- Examination of vulva with all aseptic precaution.
- Vaginal discharge are taken for the histopathology.
- General examination to rule out any systemic reason.

Management

- proper hygiene should be maintained
- removal of any factor like drug therapy
- removal of nutritional deficiency.
- Removal of emotional stress.

APIS MELLIFICA

Due to the affection of the cellular tissues of vulva it causes inflammatory condition with great soreness of the vulval region.

The vulval region has burning tearing stinging & cutting type of pains with suppressed menses.

After this inflammatory stage there is a stage of a fever which is associated with chill and thirstlessness

Due to vulvitis there is great incontinence of urine with great irritation of the parts. The patient can scarcely retain the urine for a moment.

There is stitching pain in the urethra with strangury.

Due to vulvitis there is dyspareunia which makes the female restless & rapidly she becomes very much violent.

There is oversensitiveness of external genitalia with thick inflammation.

Modalities

< After Sleeping ,warm , sexual excess

> Rest ,cold, application, when sitting erect

KREOSOTE

Due to the chronic leucorrhoea at the climacteric age or after the menopause female suffers with vulvitis with intense corrosive itching & burning & swelling of labia with violent itching between labia & thighs.

There is burning & soreness in the vulva with yellow acrid leucorrhoea.

With every emotion & exciting circumstance there is throbbing pain at vulval site.

Due to vulvitis there is painful and burning micturation, the urine burn & smarts.

When desire for urination comes then she must hurry or the urine will escape. Bloody urine with burning & pain at vulva and inability to hold the urine.

Inflammation of the vulva with tendency of formation of ulcers and gangrenous changes with high grade fever.

Vitality of the female is greatly depressed.

Modalities

< Open air, cold weather, washing, Resting especially when lying

> warmth in general

HEPAR SULPH

Due to chronic infections like Gonorrhoea & other sexually transmitted diseases there are formation of suppurative abscesses around the vulval region with papules on the vulva causing inflammation of vulva.

There are putrid ulcers surrounded by multiple papules with angioneuritic oedema on vulva.

Due to inflammation of vulva the urinary flow is impeded, it is voided slowly, without force drops vertically. Patient is obliged to wait a while before it passes and in the bladder some urine always remains.

The vulval region is so much sensitive to touch that the female faints cannot even bear the touch of clothes.

The female is oversensitive mentally as well as physically with anxiety.

The slightest injury to vulva causes inflammation & suppuration.

Modalities

< Lying on painful side, cold, eating touch

> Warmth in general

CALCAREA GARB

The vulvitis is due to genital tract infection i.e. Tubercular infection.

Due to the early menarche with unhygienic conditions there is trichomonal, monilial infections which causes vulvitis.

Due to the abscess formation in deep muscles of vulva with vaginal polyps the inflammation of the vulva never decreases.

There is sycotic trend and therefore females are prone to get over growths with constant leucorrhoea which causes burning and itching of the genitals.

There is constant aching in the vagina with chronic infarction of the womb.

There is increased sexual desire with vaginitis & sweat on external genitals.

It is indicated fat fair flabby females with inflammation of the vulva. Though there is increased sexual desire, due to dyspareunia the female is sterile.

The vulva is very much sore and least excitement causes return of leucorrhoea.

Modalities

< cold bathing, standing, pressure

> Dry, lying on affected side

MERCURIUS

Due to the gonorrhoea! infection especially second stage of gonorrhoea there is swelling of vulva with chancres on genitals.

There is rawness, soreness and there is also granulation's which are always bleeding.

There is great burning, throbbing & itching of the vulva.

There is itching of the genitals especially with contact of urine.

There is phlegmonous inflammation of vulva with boils on it i.e. along the margin of the mucous membrane and are very much painful.

The inflamed skin of vulva is very sallow, excoriating with rawness especially wherever two parts come together.

Suppuration of the abscess gives rise to acute inflammation of the vulva.

There is acrid burning leucorrhoea with rawness & as there is inflammation of the vulva the contact of urine causes itching of vulva. Due to this there is difficulty in sexual intercourse.

Modalities

< Night lying on Rt. Side, perspiration

> Rest in bed

BELLADONNA

Due to the parasitic infection like trichomonal there is inflammation of the vulva.

When there is inflammation there is congestion of vulval region which is very active causing very severe throbbing and pulsating type of pain at vulva.

Vulval region is very red hot & then the parts become very much sensitive & there is sense of protrusion.

There is sore & bruised feeling in the vulval region.

Female has sudden urge for urination and dribbling of urine & it also causes vulvitis.

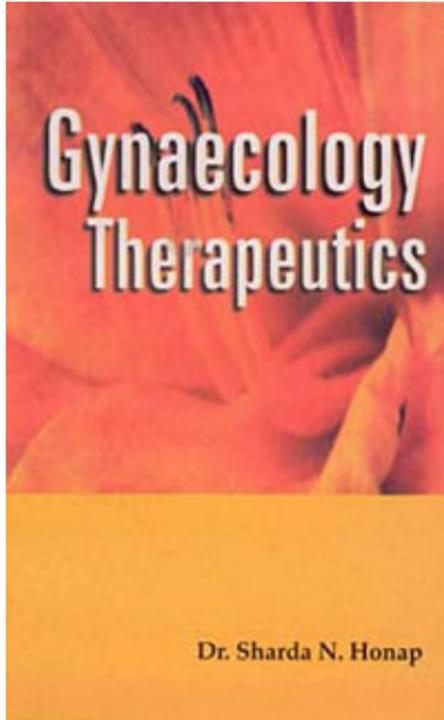

Sudden and violent attack of fever with vulvitis. The skin is smooth and shiny, hot burning skin around the vulval region. Which is very sensitive to touch.

There is haematuria with congestion & there is pressing & urging towards the genitals. Tearing pains with spasm of circular fibres of vulva prevents coition.

Modalities

< Slightest touch, night, hot , movements >

Rest, warm application
