## Preface

While homeopathy achieves remarkable results in ways that no other medicine can, it remains poorly understood and utilised by both the public and the scientific world. The reasons for this may be many, but one of them could be that homeopaths can overlook the everyday aspects of a case. Seeming behavioural difficulties in children may have a pathological cause which might go unnoticed. For example, recurring irritability in children may be caused by delayed teething, low grade ear infection, silent reflux, headache, worms, etc. One may, in choosing a 'mentals' or 'constitutional' prescription, fail to identify factors such as these, which means that the constitutional prescription does not cover such causes.

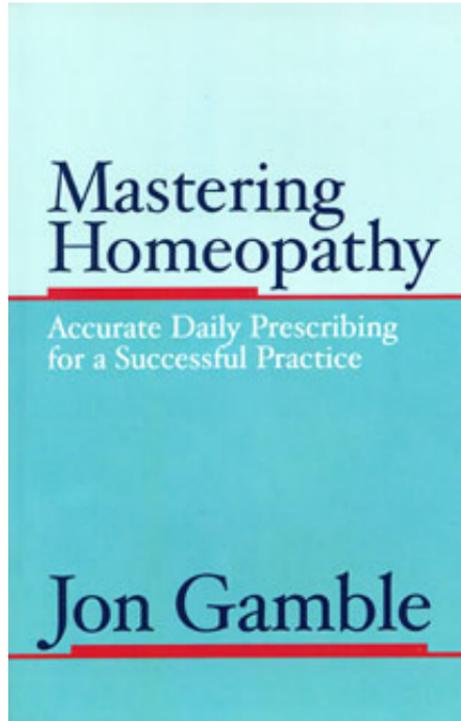

The therapeutic protocols contained herein are in no way meant to replace the important and demanding work of the constitutional prescription. We have all seen the profound transformation in a patient which the simillimum will produce. The trouble is, our mission in finding that simillimum and giving it in the first consultation can be daunting, incorrect, and often impossible. We can misinterpret complex mentals, or miss an important general which may influence the outcome. In the meantime, the patient, already a little wary about homeopathy, and often coming to us as a last resort after the failure of other therapies, will not gain confidence in either the practitioner or the method. In acute cases, one does not have time to try several different remedies. By that time the patient will already have gone for antibiotics: the first prescription must be a correct one. (I say 'a correct' not 'the correct' because there are many remedies which will improve the case, not just the simillimum).

This book of therapeutic protocols is intended to assist the practitioner to have the patient improving rapidly whilst the practitioner has time to familiarise him/herself with the case and find that constitutional remedy.

No prescriptions in this book are anecdotal, theoretical or in any way removed from the practical realities of treating sick people with homeopathy. All therapeutic recommendations have been used successfully many times over.

I lay this book in the hands of competent and fully trained homeopaths. It is assumed that the reader is familiar with the homeopathic aggravation, the primary and secondary response triggered by a medicine, and Hering's Law of Cure. If the reader is not familiar with these phenomena, it is recommended that the patient is referred to a suitable practitioner. Similarly, one must be familiar with the common symptomatology of diseases, and the pathological changes which occur with them. A clear diagnosis is essential before following the protocols in this book. As this book is intended only for fully trained homeopaths, it is not to be construed as offering therapeutic advice to lay persons, or practitioners untrained in homeopathy. In such cases, please refer the patient (or yourself) to a homeopath.
