Preface

Why is it needed?

The Organon of Medicine is not in simple English. It needs the explanations. Dr. Hahnemann did realise this and gave long foot notes and examples to make the things more clear. Even then it is beyond the capacity of a student to follow and grasp easily. This provoked many to write on the subject. Every one wrote according to his own standard, without considering the need, capacity and the standard of the common student. Their problem remained. I could feel their silent cry. I kept myself in that situation to realise and tried to explain in that capacity.

The simple looking words like minimum doses, rapid and gentle cure, comprehensible principles are analytically explained with example. E.g. no doubt a single dose may cure in many cases but in no way minimum means one dose only. It is not fixed to any number but to the demand of case as per type and conditions. It may be one, three, five, ten, etc. Five doses may be more where three are needed but less where ten doses are required, e.g., the quantity of food minimum for a boy of 5-6 years of age may be very less for the man of 25-30 years. The words rapid, gentle are also as per the conditions of case, acute, chronic, simple and complex, the gentle, in receiving, (taste, feel etc.), not producing any side effects.

For the results of different types of diseases in the same person, the results are not kept limited to the examples of past diseases (which are no more present) but to the new and recent age.

The symptoms under the various names are explained with reference to the disease, medicine, materia medica and their use and utility (Dr. Dhawale calls PQRS, R.P. Patel RUPS and Hahnemann ref. Aph. 153).

Many peculiar, unique and special topics are considered in relation to universal concepts. Rarely one can get such a vast demand within the pages of this work. It is mainly for the students to comprehend and conceive Organon through Aphorisms, foot notes, other references from any corner. The example of dynamic and dynamis becomes clear with example of remote control and TV.
